

TransitionZero joins Energy Transition Council as a delivery partner to its Rapid Response Facility

London, UK, Tuesday 15th December 2022: The climate data non-profit TransitionZero has become a delivery partner to the Energy Transition Council (ETC)'s Rapid Response Facility (RRF).

The [ETC](#) is a multilateral platform bringing together over 30 governments, multilateral development banks, technical partners, and international organisations. The ETC works with 11 partner countries in the Global South that have energy transition challenges and opportunities, including Bangladesh, Egypt, India, Indonesia, Lao PDR, Kenya, Pakistan, Philippines, Morocco, Nigeria, and Vietnam.

The ETC's RRF is a program delivering fast-acting and demand-driven technical assistance to address transition barriers and unlock larger scale, longer term finance. So far, the RRF is responding to 32 requests for technical assistance, across the 11 ETC partner countries, through its delivery partners (over 25).

As a delivery partner, TransitionZero will use its data, modelling, and analytical capabilities to assist RRF partner countries with transition challenges in their electricity sectors. Already, TransitionZero will potentially contribute to a technical request on power plant financial modelling to manage transition risk.

Matt Gray, Co-founder and CEO of TransitionZero, commented:

"We're excited to contribute to the Energy Transition Council's vital work, as a delivery partner for the Rapid Response Facility. We look forward to using our data, modelling, and analytical capabilities to assist emerging market governments to accelerate their clean energy transitions".

Ujunwa Ojemeni, Senior Policy Advisor, Energy Transition & Technical Assistance Delivery, E3G, who provides strategic support to the ETC, said:

"We are pleased to welcome TransitionZero as a delivery partner for the Energy Transition Council's Rapid Response Facility. We believe TransitionZero's technical expertise will make a significant contribution and will help to enable an accelerated energy transition while supporting climate action".
